ABSTRACT

This capstone research project look at the problem of the passengers of the taxi in Davao City and investigates what are the main or usually problem during the ride. It shows the problem is passenger trick the route and cause of expensive fare. The researchers are considering about how to help taxi passengers. A way to do is to create mobile application because most of people have their own smartphone. They can easily install application into their mobile and go. It serves everything that passengers need when they use taxi service. This app will aim to help passenger save money, able to share their fare and passengers can view their route. The researcher was conducted through a questionnaire distribution to survey the people who use a taxi for their travel and collect data for the study.
